THE ANTI-BALLOON CRUSADE.

The legislators at Albany who have set out on a crusade against parachuting balloonists are presumably actuated by a most humane and commendable spirit. Their object, too, is one the accomplishment of which would be an eminently satisfactory piece of work. There is no doubt that the use of

balloons and parachutes for mere purposes of exhibition and for the bewilder ment of gaping spectators is frequently ment of gaping spectators of recklessness. as to fall little short of the suicidal line A long list of accidents, fatal and otherwise, proves this to be true. One member who supported the proposed measure made this declaration:

"If I thought the bill would stop the fellows killing themselves I'd oppose it, but it won't, and it ought to pass."

"The fellows" are the reckless aeronauts. This assertion that a bill ought to passbecause it wou't accomplish its ostensible purpose will long stand, perhaps, as one of the most unique that ever came from a statesman's lips.

It will be both interesting and instructive to follow the apparent path of these two planets for the next few months. Both are moving eastward among the fixed stars, but in consequence of the apparent motion of the sun in the same direction, and which is intermediate between those of Jupiter and Venus, the former is apparently approaching the sun and will be lost to view in the splender of his rays on the 20th of March, after which he will become a morning star. apart.

The latter, however, is apparently receding from the sun and approaching her greatestelongation, which will occur April 2D, when her angular distance from the sun will be about 45½ degrees, and just about fifteen minutes before her greatest elongation she will be occulted by the moon, but the occur will be invisible in this country.

On the 2d of June she will attain her greatest brilliancy, which will be nearly three times greater than at present. At this time she will be visible to the maked eye during the day and at night will cast quite a strong shadow.

June 17 she will become stationary for a short time. At this point in her apparent course she will be moving directly towards the earth, or, to be more exact, the straight line joining the earth and Venus moves parallel to itself so that to a spectator on the earth the planet will appear to preserve the same absolute direction in space.
